

A Leading UK manufacturer of
virtually unbreakable drinkware
& catering products

**100%
REUSABLE.**

Both our Econ Polystyrene & Elite Polycarbonate ranges are 100% reusable.

**100%
RECYCLABLE.**

When they eventually come to the end of their very long life, they are ground into pellets and remanufactured into further goods within other industries. This makes all of our products 100% recyclable.

**VIRTUALLY
UNBREAKABLE.**

Unlike glass, our Polycarbonate products will not smash when dropped, which means they can last for years. No breakages mean a safer environment for everyone and minimises the need to purchase replacements, thus making them extremely cost effective!

REUSABLE, NOT DISPOSABLE.

 @bbp_marketing

A leading UK manufacturer of virtually unbreakable drinkware & catering products

Our manufacturing site alongside the Calder and Hebble Navigation in Mirfield.

Welcome

We are a privately owned company based in Mirfield, West Yorkshire.

Originally formed in 1882 you may know us as BB Plastics. We have been operating on the same manufacturing site since 1917.

BBP are recognised as a leading UK manufacturer of reusable drinkware and catering products. We have a large range of styles & sizes and continually expand our range in order to fulfil our customer's requirements. All our production machinery are of the latest generation, computer controlled and some fully electric as these machines are proven to be more cost effective and efficient.

We operate on a 24 hour continual production basis and supply to the catering distribution network from stock on either a 3 day or next day service.

We also now export to over 25 countries.

Look out for these logos throughout the brochure which indicate key information

COLOUR OPTIONS

Whilst BBP stocks a large range of different colour options, we can match almost any new colour requested by customers. If you can think of it, the chances are we can make it.

A selection of the Black and White range.

Clear 50ml Econ shot with Neon colours in the back ground.

Gold and Silver Elite Champagne Flutes - one of our newer releases.

The current red range with part of the black and white range in the background.

Part of our Econ Neon range, glowing under UV light.

Printed Drinkware

Our decorative coloured logos are performed via screen printing which works best when printing onto Polycarbonate and Polystyrene.

- Pad & Rotary Screen prints
- 1-5 colours (full colour)
- Size of print depends on the size of the glass.
- Mock up images available on request
- No set minimum quantity
- Please email us for a quotation info@bb-plastics.co.uk

Lasered Drinkware

As well as undertaking the usual UKCA marking and Nucleation, our lasers are capable of far more intricate applications.

Most artwork or logos supplied to us can be run through the laser software and converted into a compatible image. The lasers can only etch in dark grey but it's more cost effective than screen printing and has a quicker turnaround time. Laser application not available on Econ range.

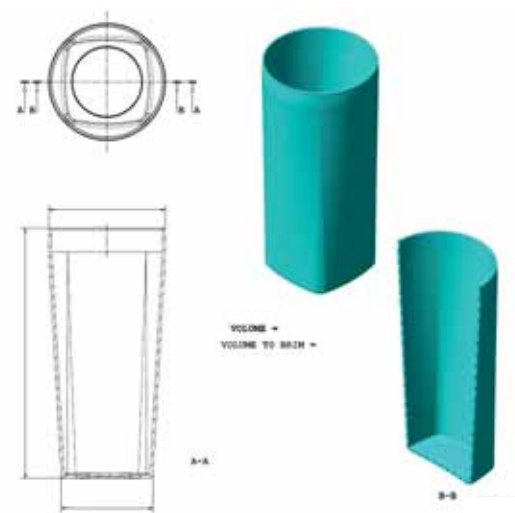

Bespoke Design

BBP can develop bespoke products for you or your customer from unique designed drinking/ serving vessels to personalised printing and decorating of our existing ranges.

We will take your concept from initial design to final production with full CAD & 3D model facilities and the option of SLA models for you and your customer to handle prior to full production.

UKCA Marking

The law states that the UKCA marking became part of UK law at the end of the Brexit transition period, on 31 December 2020, with the coming into force of The Product Safety and Metrology etc. (Amendment etc.) (EU Exit) Regulations 2019.

This means that any glasses manufactured and sold after this date must bear the UKCA mark to be legally used within the UK market. These are not legal to be used within the European market or Northern Ireland market as both of these have their own legal markings.

Any glasses manufactured before this date but purchased before or after this date can bear the CE mark are still legal to use within the UK market until they are disposed of.

Brim and line measured glasses can have the legal markings anywhere on the glass with the exception of line measures which must clearly state the line and capacity to that line on the side of the glass.

You need verified glasses if you are serving alcohol in licensed establishments such as bars, pubs, restaurants, hotels and cafes but not if you are serving alcohol free of charge, using the glasses at home or are using an alternative measuring device.

Look out for the UKCA Marked logo throughout the catalogue which indicates what options are available as standard.

Nucleated

An additional process in polycarbonate products, maintaining carbonation to keep the bubbles fizzing and drinks fresh.

Look out for the Nucleated logo throughout the catalogue which indicates the product is nucleated.

Materials

We manufacture in two materials: Both materials look very similar.

Virtually unbreakable polycarbonate –
we call this our Elite range

Rigid reusable crystal polystyrene –
we call this our Econ range

Elite Range

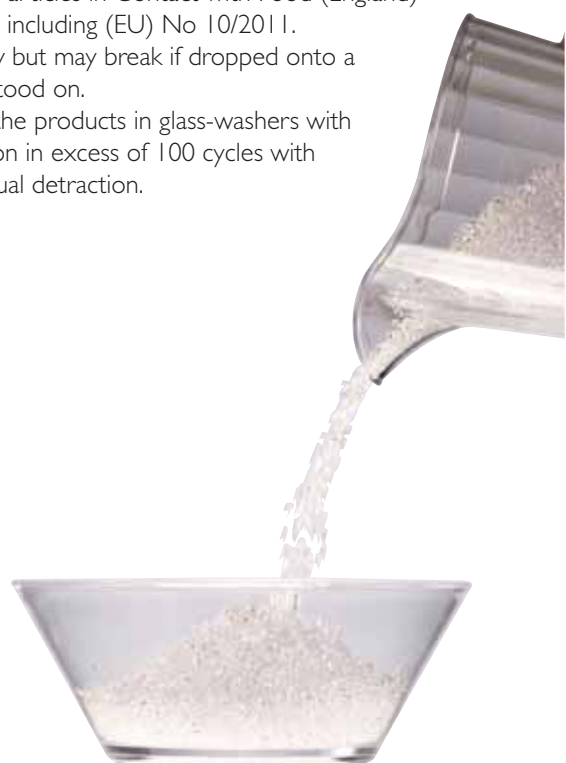

Our Elite range of products is manufactured from polycarbonate material. This material is Food & Drug approved and conforms to the Materials and articles in Contact with Food (England) Regulations 2012 including (EU) No 10/2011. It has superior strength over other plastic materials and therefore the products are virtually unbreakable. We have tested the products in glass-washers with a standard solution in excess of 1000 cycles with no noticeable visual detraction.

Econ Range

Our Econ range of products is manufactured from crystal polystyrene material. This material is Food & Drug approved and conforms to the Materials and articles in Contact with Food (England) Regulations 2012 including (EU) No 10/2011. It has good clarity but may break if dropped onto a hard surface or stood on. We have tested the products in glass-washers with a standard solution in excess of 100 cycles with no noticeable visual detraction.

After Care

Your glasswash manufacturer will be able to advise of which solution and cycle time best suits your machine. The water type in your area also needs to be taken into consideration. You can handwash using any mild solution and dry with a soft cloth, please note using a harsh abrasive or rough cloth may cause damage to the appearance.
